

PRODUCT REVISION ANNOUNCEMENT

RELEASE DATE: 23/12/2011 - Document #6111223RO

This announcement contains the revised information about packaging for (2) index of Smart Ledbox, Illuminated Maxi Frame.

Dear M&T Displays Partners, Distributors and Other Interested Parties:

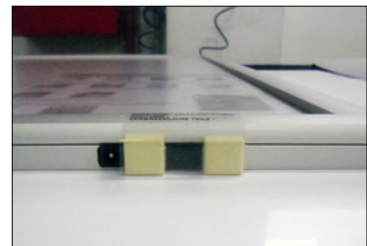

M&T Displays conducted a study of new packaging process to protect the switch placed at the bottom of unit in all above illuminated products. Through this packaging development process, M&T targets to prevent unpredicted damages during mounting phase.

Switches under the bottom profile were regarded liable to get damaged during assembly or by mishandling.

With this revision, we place pads on both sides of the switch and cover it with a sticker. These pads are 8mm in thickness and protect the switch against damages. When you put unit on the floor, these pads keep the unit off the ground and the switch does not touch the floor. Also the sticker includes warning for the users about the fragility of switches.

For all your pending orders at our factory, the improved design will be used continuously. Please communicate with your purchasing and sale team for introducing this new status of improved packaging.

BOM view changes – There will be no changes in displays components or there have been no parts which have been modified. It is only the process of packaging in production station that requires to be noted.
