

# PRODUCT REVISION ANNOUNCEMENT

RELEASE DATE: 26/12/2012 - Document # 7577 LD

This announcement contains revision information on one (1) index of illuminated LED frames, 50 mm model.

Dear MT Displays Partners, Distributors and other interested parties:

Effective today, MT Displays is launching the corrective action plan for the version 1.2 Led Frames specification existing in illuminated Products Index. Through this specification development, MT will allow heating and ventilation process to stand outside the aluminum structure. And MT will also allow easy Access and replacement of power supply during and after installation when need be.

50 mm Led box Background: Due to application of various different and oversize products, the existing interior structure of the 50 mm Led box has become inapplicable, insufficient. There have been some unexpected claim feedbacks from previously applied items, and further requests for increasing the efficiency and ventilation of power supply at interior use. Next steps of revision:

For this purpose, MT concentrated on replacing interior power supply with external power supply out of to 50 mm aluminum frame box.

Distributor participation: MT plans to track changes automatically. This, in turn, means that your data should be updated. For your company please communicate with your purchasing team for introducing this new status of external power supply. For all your pending orders at factory, the improved design will be used continuously.

Bom view changes – There will be no changes in display components and there have been one component power supply that has been replaced with an external component.
